

Attracting Lizards & Skinks to your Garden

Lizards are great natural pest controllers. Blue-tongue Lizards will happily devour your snails and slugs, while Marbled Geckos and Garden Skinks generally prefer to snack on insects. They are also opportunists that will eat berries and seed.

RECIPE:

- Provide flat rocks in a sunny spot to warm up.
- Mulch garden beds to attract insects to eat.
- Practice natural pest control.
- Include a shallow water supply on the ground.
- Provide shelter under shrubs and tussocky grasses.
- Lock up your pets at night.
